

SUBHAN KASHIF

AI Engineer · LLM & Full-Stack Developer

subhankashif696@gmail.com | 0321-1017677 | Lahore, Pakistan | github.com/Subhan696 | linkedin.com/in/subhan-kashif-7a6109375

PROFESSIONAL SUMMARY

AI Engineer and Computer Science Fresh Graduate who designs and ships LLM-powered applications end to end. Built a production Retrieval-Augmented Generation (RAG) platform and LLM orchestration pipelines with LangChain, OpenAI, and vector databases, backed by strong full-stack engineering across React, Node.js, and Python. Pairs applied NLP and prompt-engineering skills with solid OOP, data-structures, and database fundamentals to turn AI prototypes into reliable, maintainable software.

TECHNICAL SKILLS

AI / Machine Learning: LLM Orchestration · Retrieval-Augmented Generation (RAG) · Prompt Engineering · OpenAI & GPT-4o API · Embeddings · Vector Databases (Pinecone) · Semantic Search · Natural Language Processing (NLP) · LangChain

Languages: Python · JavaScript (ES6+) · TypeScript · Java · SQL · HTML5 · CSS3

Backend: Node.js · Express.js · FastAPI · REST API Design · JWT Authentication

Frontend: React.js · React Native · Electron.js · Responsive UI · Component Design

Databases: PostgreSQL · MongoDB · SQLite · SQL Server · Mongoose · SQLAlchemy

Foundations & Tools: OOP · Data Structures & Algorithms · Git & GitHub · Postman · Agile · Debugging

EXPERIENCE

Rabix Technologies — Trainee AI Engineer

Feb 2026 – May 2026

Lahore, Pakistan

- Built multi-step LLM orchestration pipelines that automated manual, repetitive internal workflows, cutting the hands-on time staff spent on routine tasks.
- Improved the relevance and consistency of LLM outputs through structured prompt engineering and retrieval-augmented generation (RAG) over an internal knowledge base, reducing hallucinated and off-topic responses.
- Integrated GenAI automation into existing tools via Python REST API services, making LLM-driven features available within the team's day-to-day workflow.

Dev&Mark — Junior Software Engineer (Full-time)

May 2025 – Aug 2025

- Built and shipped full-stack features end to end (React front end, Node.js / Express REST APIs), taking work from requirement to deployment alongside senior engineers.
- Improved page responsiveness and backend reliability by optimizing PostgreSQL / MongoDB queries, adding indexing, and refactoring redundant API logic.

Dev&Mark — Full Stack Developer (Internship)

Feb 2025 – Apr 2025

- Built responsive, reusable React components and UI modules end to end under senior-engineer mentorship, contributing to features that shipped to production.
- Implemented and tested REST API endpoints (Node.js / Express) connected to the database layer, supporting core application workflows.

PROJECTS

WhatsApp Business AI Sales Agent & CRM

June 2026

Python · FastAPI · LangGraph · LangChain · PostgreSQL · Node.js · Docker

- Built a full-stack autonomous AI sales agent that converses with customers on WhatsApp, browsing product catalogs, quoting accurate pricing, and guiding customers through Cash-on-Delivery and Bank Transfer checkout flows.
- Engineered a cyclic agent architecture with LangGraph and a PostgreSQL checkpoint for cross-turn memory, giving the agent tool-calling actions for catalog search, invoicing, and payment switching under strict anti-hallucination protocols.
- Built an integrated, mobile-responsive CRM dashboard giving admins real-time chat logs, order status tracking, and customer lifecycle tracking across pipeline stages (lead, interested, closed won).
- Deployed a Dockerized, multi-service architecture — FastAPI backend, a dedicated Node.js WhatsApp bridge, PostgreSQL, and Nginx with automated Certbot SSL — orchestrated via Docker Compose.

GradeWave — Smart Teacher Assistance Using NLP (Final Year Project)

Jul 2025 – May 2026

React · React Native · FastAPI · PostgreSQL · LangChain · OpenAI · Pinecone

- Built a full-stack AI grading platform (3-person team) that automates quiz generation, short-answer grading, and plagiarism detection, cutting teacher workload and giving students instant feedback.
- Engineered a Retrieval-Augmented Generation (RAG) pipeline with LangChain, OpenAI embeddings, and a Pinecone vector store to auto-generate topic-relevant quizzes from uploaded course documents.
- Built an automated grading engine combining deterministic MCQ scoring with a GPT-4o rubric-based short-answer grader, plus semantic plagiarism detection using cosine similarity.
- Delivered a React + TypeScript web app and a React Native (Expo) mobile app on a unified FastAPI REST API with JWT and Google OAuth authentication.

SecureHaven — Online Voting System

Jan 2024 – May 2024

React.js · Express.js · Node.js · MongoDB · JWT

- Built a secure full-stack voting platform with role-based access control (admins, candidates, voters), protecting ballot integrity via JWT auth and bcrypt hashing to prevent duplicate voting.
- Designed a real-time results dashboard with live vote tallying and a responsive React interface over RESTful endpoints for registration, ballot submission, and audit logs.

ATG Warehouse Management & POS Billing System

Jun 2024 – Oct 2024

Electron.js · React.js · SQLite · Node.js

- Developed a cross-platform desktop app for wholesale operations (inventory, purchase orders, POS billing) on an offline-first SQLite schema with real-time stock deduction and printable receipts.
- Added reporting modules for sales analytics, stock summaries, and automated low-inventory alerts.

EDUCATION

B.S. Computer Science

Sep 2022 – June 2026

COMSATS University Islamabad, Lahore Campus

Relevant Coursework: Data Structures & Algorithms · Object-Oriented Programming · Database Systems · Software Engineering · Web Technologies · Artificial Intelligence

Intermediate (FSc) — Pre-Engineering · Grade A

Sep 2020 – Jun 2022

Forman Christian College (FC College), Lahore

Matriculation — Science · Grade A*

Apr 2018 – Jun 2020

The Educators School, Lahore

LANGUAGES

English — Full Professional Proficiency · Urdu — Native
